WIFI + BLUETOOTH RELAYS MODULES BASED ON ESP32-WROOM-32E CONTROLLED BY SMARTPHONE OR ARDUINO / RASPBERRY Pi MODULES RELAYS OUTPUTS 10A/250Vac or 10A/30Vdc

SEEIT Programmers

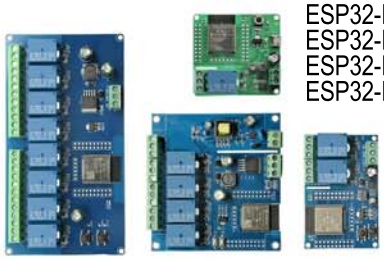

Introduction:

This 2 channels interface relays modules can control various appliances, and others equipments by Wifi or Bluetooth thanks to its ESP32-WROOM-32E microcontroller, (with 4Mb flash memory).
The interface can be controlled directly by the Wifi or Bluetooth of your smartphone under Android or IOS.
The interface can be also programmed directly by Arduino or Raspberry IDE (Integrated Development Environment).
It is widely used in smart wear, smart home security, remote control, automotive electronics, intelligent lighting, industrial Internet of things and other fields. Thoses modules card are powered by a supply of 5Vdc and other.
This board is equipped with high current relays modules. They load 10A/250Vac max or 10A/30Vdc max.

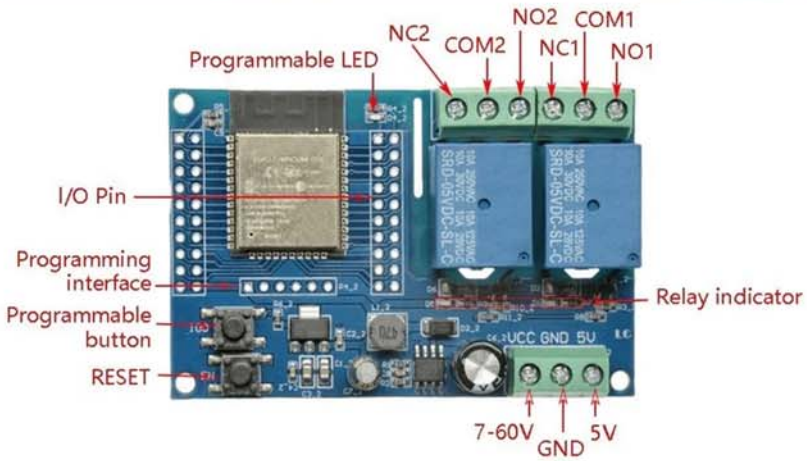

Hardware & Electrical specifications:

Power supply: 5Vdc or 7~60Vdc (Terminal block).
Microcontroller : ESP32-WROOM-32E (4 MegaBytes Flash).
HE10 connectors : programmable interface for all pins of the ESP32.
Terminal block connectors with 3 plugs : Relays outputs.
Relays outputs max : 10A/250Vac or 10A/30Vdc.
Size product : 48x75x17mm.
Transmission Wifi : 802.11 b/g/n with 2,4 GHz.
Transmission Bluetooth : compatible 4.2 BR/EDR and BLE standards.

Also available :
ESP32-RELAY01
ESP32-RELAY02
ESP32-RELAY04
ESP32-RELAY08

Connection diagram :

Item includes:

PCB board relay module.
Mobile phone application available on Internet.
Arduino or Raspberry IDE available on Internet.
Documentations in English and French available on Internet.
